

madVR Envy on Display at the Home Cinema Happening 2021

The [madVR Envy](#) is on display this weekend at the 10th edition of the [Home Cinema Happening in Belgium](#). The Envy is featured in *three* cinema rooms - with the Sony GTZ380 and in two others with the JVC NX9 in two other rooms.

The rooms will feature the [madVR Envy Extreme](#), [Trinnov Altitude16](#), [Storm Audio ISP](#) and amps, [Sony flagship GTZ380](#) shown on a 5m (16.5 feet!) wide screen, [JVC NX9](#), [Zappiti](#) media player, [ATI](#) amps, [RBH](#) speakers, [Dali](#) speakers, [SVS](#) speakers and subs, [JL Audio](#) subs, [Lab Gruppen](#) amps, [Panamorph](#) DCR lens (using Envy's geometry control to easily remove a-lens barrel distortion), screens from [Xtrem Screen](#), [DreamScreen](#), [Screen Innovations](#), and much more.

Come out and see the award winning "Best in Class" Envy in action, with live demonstrations of its HDR tone mapping (including Highlight Recovery, Contrast Recovery, and Shadow Detail Recovery), instant aspect ratio detection and black bar management, and our highly innovative non-linear stretch (NLS+) platform. If you think you've seen NLS before, just wait until you see it done with an Envy.

Here's a few quick pictures from setup today:

madVR LABS
