

Introducing DTM 2.0

Our next-generation dynamic tone mapping engine is here!

We are excited to announce that the next-generation dynamic tone mapping engine, version 2.0 is here! DTM 2.0 enables you to optimize the appearance of your HDR content, choosing from several different looks.

Everything from very natural and pure, with crazy levels of detail, to images with more punch and the deepest contrast and depth you've seen yet. Coupled with our unique [Profile System](#), different HDR looks can easily be customized for different displays, sources, content type, and more.

The new DTM 2.0 engine provides a stunning image out of the box, taking 4K HDR to a whole new level. And now you can easily achieve the ultimate HDR look you want in your theater, based on your personal preferences, tastes, and director's intent, unlike anything else.

The feedback our customers has been incredible, and we thank everyone for their input. Note too that we are just getting started with the DTM 2.0 engine, with many more enhancements still to come. We're excited for Envy owners to experience what's coming next!
