Revision 1.0

Savant Profile for Envy - Setup Instructions

A fully baked Savant Profile is available to automate the use of madVR Envy with Savant automation systems. Please follow these steps to get started:

- Ensure you are running the most up to date Savant Application Manager (SAM).
- Close SAM and reopen it. This will cause the download of all new items that are not already in your profile library.
- The Profile madVR (Envy – IP) will be available when searching the “Library” within the Savant Blueprint.
- Assign Envy a static IP in your router.
- When adding the Ethernet connection to the madVR Envy in Savant Blueprint, ensure you have the following:
 - Static IP address of the Envy
 - MAC address of the Envy
- After following the above steps, you will now have the Savant functionality.

Note: Knowledge of Savant Triggers and Workflows is needed to finely tune a system.
